# OVERVIEW

One important component of Monash's COVID Safe Plan is the provision of well-ventilated spaces to reduce the risk of COVID 19 transmission.

A comprehensive review of the ventilation systems supporting all University buildings and spaces has been conducted. The Australian Standard for building ventilation AS1668.2 was used to assess the suitability of the system to control for the transmission of COVID 19. The ventilation systems were categorised into 4 main types:

1. Fixed 100% outside air (very low risk)
2. Variable outside air (very low risk)
3. Fixed outside air (low risk)
4. Local or no ventilation (moderate risk)

The vast majority of the University buildings and ventilation systems are in the first 3 categories and were assessed as very low to low risk for COVID 19 transmission. A number of buildings with category 4, 'local or no' ventilation, were identified and additional control strategies developed to further reduce the risk of COVID 19 transmission. This includes:

- a. removal of the space from the faculty or central teaching schedule.
- b. scheduling/taking group activities to other well-ventilated spaces or outside
- c. introduction of either conditioned or unconditioned forced outside air or forced extraction with make up air through internal wall louvres
- d. use of openable windows and doors to introduced outside air
- e. reduced occupancy limits
- f. use of portable HEPA filters

Please watch this [video](#) which further explains the ventilation systems at Monash and their role in controlling the risk of COVID 19 transmission.

The University's Ventilation strategy is part of the Monash COVID Safe Plan.

# VENTILATION CLASSIFICATION

Buildings on our main campuses and sites in Australia have been classified based on the ventilation categories listed above. Please review this document to find the ventilation classification for your building.

<b>Green</b>	Buildings coded green have central ventilation systems that meet or exceed the standard for building ventilation AS1668.2 and provide sufficient outside air to ensure they are low risk for COVID-19 transmission. These are type 1, 2 or 3 systems.
<b>Orange</b>	Buildings coded orange have either local or no ventilation systems (type 4) and require additional COVID safe measures to be applied to reduce the risk of COVID-19 transmission. Please contact Buildings and Property for details about your building and your specific area in the building.
<b>Grey</b>	Buildings coded grey have a combination of central and local ventilation systems and/or no ventilation systems. Please contact Buildings and Property for details about your building and your specific area in the building.

*Note:*

*If your building is not shown on the campus lists below please contact Buildings and Property at [buildings.property@monash.edu](mailto:buildings.property@monash.edu) for further information.*
